Normal, slight colour variation is unavoidable and constitutes no grounds for complaint.

Pile Fabrics/Chenille:

The effects of pressure, heat and moisture can produce depressions from nap displacement over time. This is normal with nap fabrics, it is called patina, and is not a quality defect.

Flat Woven Fabric:

In certain circumstances, the surface of flat woven fabrics can roughen and small knobbls can form. In the trade, this is referred to as fluff. It frequently occurs very early on. The formation of fluff, and removal, does not affect the durability of the fabric.

A lot of clothing textiles show inadequacies in the fastness of colorants. This means that the dyes sometimes come off on upholstery. This is quickly noticeable especially with light colored upholstery, it is not an indication of a falling in the upholstery textile, but is due to a flaw in the clothing textile, for which complaint needs to be lodged at the clothing store.
